

Simon Herefords

Private Treaty Bull Sale

Cattlemen,

Welcome to the private treaty offering of bulls from Simon Herefords. This year's offering includes 15 yearling bulls and 18 range ready coming 2-year-olds. The bulls in the offering are the top of the crop from the last 2 calf crops. None have been held back or sold prior to this listing. The bulls have not been creep fed and will stand up to the toughest of range conditions.

We have always put a lot of selection pressure on the cowherd to produce trouble free, feed efficient, easy calving, high performing cattle. Function, fleshing ability, feed efficiency, and longevity are valued highly in our program. It has been an unusually cold winter, which is driving up feed costs for the cow/calf man and the cattle feeder as well. Wintering feed costs are still the largest single cost associated with the cattle business. Those producers who have the lowest maintenance, most efficient cows will have a significant advantage under any market condition. We have always believed in managing our cows that puts selection pressure on efficiency, fleshing ability and fertility.

This is the 3rd year that we have undergone feed efficiency testing on the bull calves. The past 2 years, they have been fed at the University of Wyoming under the Growsafe feed system. We have found significant differences in feed efficiency from the top to the bottom of the bulls. From the data available, it certainly looks feasible to improve our feed efficiency by 20% without affecting performance.

We have always finished out our own steers on the home place. This past year, however, we sent the entire calf crop, including registered mates to the bulls and the entire commercial group, to the National Hereford feedout. They performed very well, ranking in the top tier for ADG, Feed efficiency, and graded 70% choice. They outperformed the average net profit by \$49.50 per head.

All the bulls will be ultrasounded for carcass data in mid-March, at which time yearling weights will be taken.

The entire calf crop is annually tested for BVD PI, and we have never had a positive in 4 years of testing.

The Simon Family • Brian, Colleen, Alison and Loretta

"Mac" sires low birthweight, well pigmented calves with thickness, good growth, super disposition and correct structure. His bulls have excellent testicular development and his daughters have been a true pleasure to work with. They are moderate sized, excellent uddered females with great maternal instincts that work hard and raise big calves. His influence in my cowherd will be long lasting through his many daughters. The average adjusted birthweight on 73 head of bull calves is 83 lbs. and 84 heifers averaged 80 lbs. Mac is a trait leader for birthweight and CED.

A home raised bull used AI on heifers with great results. In 2008, ten bull calves averaged 79 lbs, 10 heifers averaged 77 lbs and had a WW ratio of 100. His EPD data should continue to improve as more data is turned in. He is out of a high producing cow family. Her 2008 bull calf is 0837. At the 2009 NHF test, 8 of 10 steers graded choice and gained 3.92/day. He bred 43 cows 6/12 to 8/20.

Liberty was purchased to improve thickness and fleshing ability in a calving ease prospect. He has been used on a wide variety of cows, both registered and commercial, and his ability to consistently sire thick, wide topped, deep quartered calves, with lots of spring and depth of rib is unmatched by any bull I have ever used. He has several daughters with top calves at side.

24F was selected for use as an AI sire. No other bull in the breed can match his data for REA, IMF and Milk traits. He has over 700 progeny in 100 herds with 219 ultrasound scans. He is a trait leader in CEM, REA, IMF, BMI, CEZ and CHB. On top of that, he was still working in the pasture at 11 years of age. His daughters are well known for their udder quality.

A moderate framed, extremely quiet bull. His dam produced until she was 11. We used one son on heifers, and he is the sire of the mother to the 0855 bull.

Yearling Bulls

We underwent the 3rd year of feed efficiency testing this year. The yearling bulls were sent to the University of Wyoming SAREC research station at Lingle, Wyo., on the 6th of November. After a warm up period, they were weighed on Dec. 1st and were fed on the Growsafe feed system where every bite the bull eats is weighed for a period of 70 days. This system allows the calculation of actual feed conversion data on every bull. The bulls were fed a high roughage ration consisting of 4.8 lbs. corn, 4.8 lbs. haylage, 4.8 lbs. hay, and 12.8 lbs. of silage per day. The ADG on the entire group of 55 head was 3.08 lbs. The ADG, FG, and RFI are listed with their rank in the test. Cow weights at weaning are included.

An ET calf out of a cow that produced until she was 16 years old. A lot of longevity, udder quality built into his pedigree and to top it off, he was the 9th high ADG, 3rd in FG, and 12th in RFI. Will keep an interest.

A cherry red, easy keeping, thick made bull from a 774 son that I used on heifers very successfully several years ago. His daughters are the right kind, thick, easy fleshing, and top notch udders that raise good calves. His 7-year-old, perfectly uddered dam ratios 101 WW and 100 YW on 5 calves. Granddam produced until age 13.

0850 - daughter of 0509

0509 and 0730, as a first-calf heifer

2-year-old bulls grazing, summer '09
